A powerful reflection
of the changing times.

FORD LTD

*Like a Stradivarius
LTD is crafted to
perform with balance
and precision.*

For all the beauty of their voices, the violins of Antonio Stradivari were crafted as much for performers as their audiences. They were made to be an extension of the body as well as the soul—to allow the musician to play with poise and fluid grace.

In much the same way, LTD is crafted to be part of you. Its sleek, simple lines reflect a desire for quiet elegance. Its tasteful interior describes an awareness of the finer things in life. And now, as you drive LTD, you'll feel your heart beating a little faster.

Now LTD is powered by an electronic fuel-injected six cylinder engine. Based on the successful Ford 4.1 litre Alloy Head II, this EFI engine incorporates the Bosch LE Jetronic fuel injection system, which is widely recognised as one of the world's finest.

The EFI engine was developed to provide a fine balance between performance and responsible fuel economy. It develops V8 style power and torque, but without a V8's thirst. It is also a quiet engine, which you'll no doubt appreciate while enjoying one of the many other fine features of the Ford LTD—its high-fidelity, four-way stereo system.

The superb Philips Premium Sound System incorporated into the LTD comprises:

- Tape Deck
- 4-way tuner
- 5-band graphic equaliser
- Power amplifier
- 4 individual speakers.

The tape deck is of high specification. It has a ceramic playback head and a Dolby noise reduction system to provide excellent sound reproduction. Designed for quiet operation, its refinements include a muting circuit on fast-forward and rewind modes.*

The tuner has many features for clear, enjoyable reception, particularly of stereo FM stations. As well as normal tune and pre-select buttons, it has Auto Scan and Auto Search capability. Facilities which make listening more pleasurable and simplify your selection of stations.

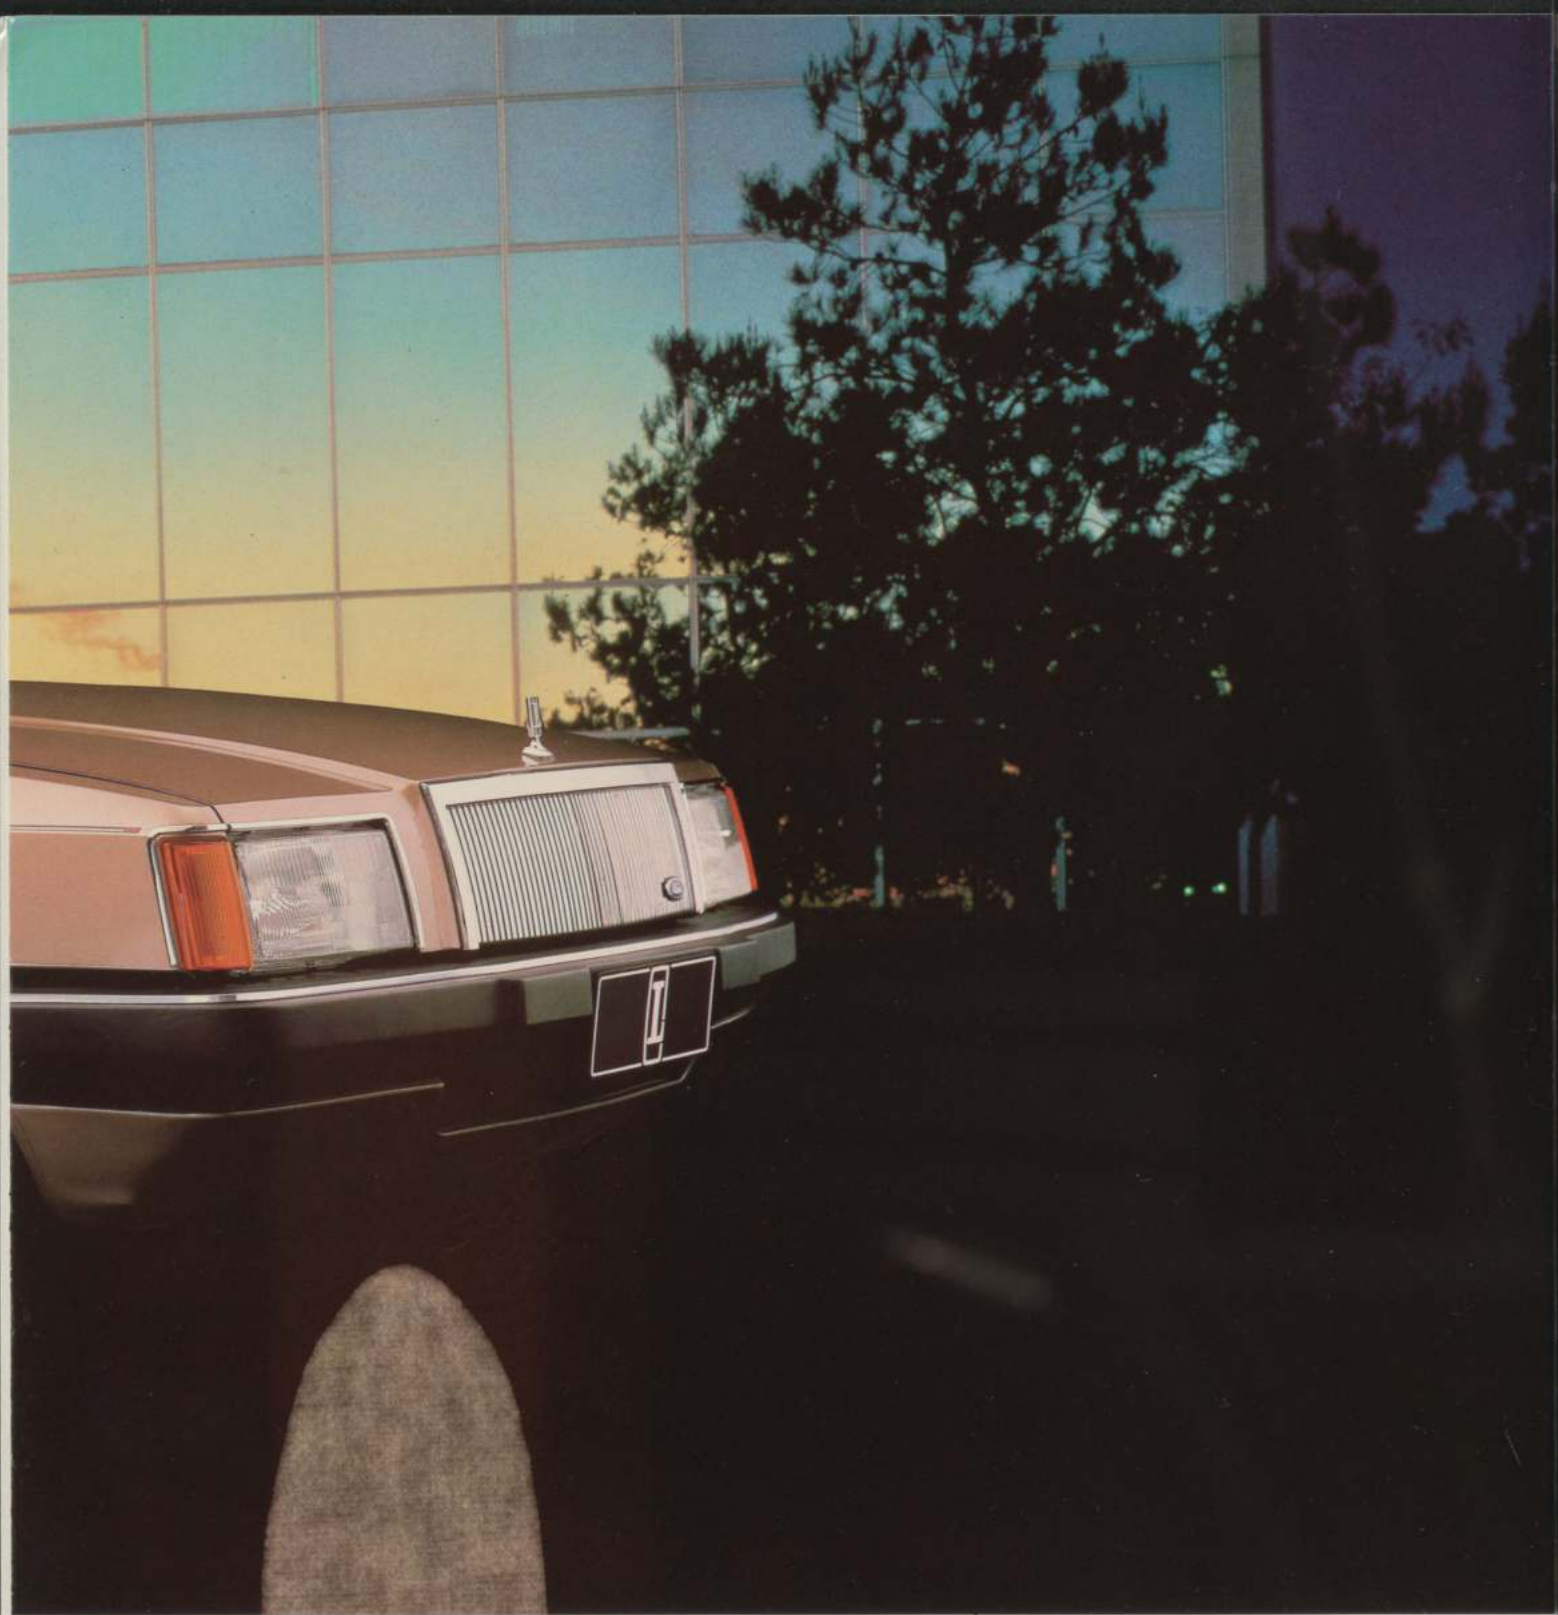

*Registered Trade Mark Dolby Laboratories.

Output of the tuner or tape deck is channelled through a stereo graphic equaliser comprising 5 amplification bands. These enable you to tailor the tone quality for personal taste.

A power amplifier of 12 watts per channel and 4 high quality speakers ensure that you'll enjoy the performance, whether it's the London Philharmonic in full flight or the beautiful voice of a single Stradivarius.

The Ford LTD is a winner of the Australian Design Award.

In the same manner as Chesterfield furniture, the LTD name has come to represent superb comfort and refined elegance.

The most esteemed private clubs in the world are often furnished in the distinctive style of Chesterfield couches and armchairs. Elegant they are, yet they are more renowned for their comfort.

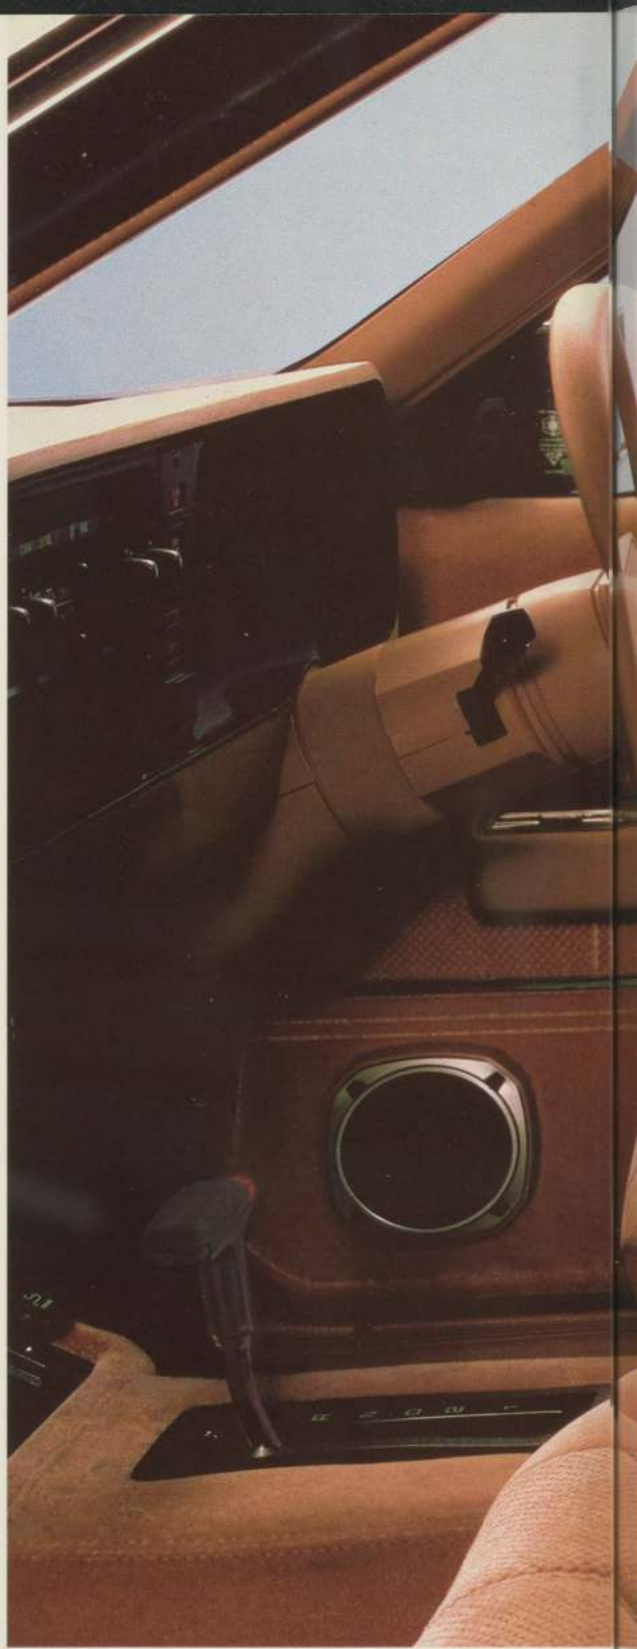

In the mode of these clubs the interior of the LTD is roomy and quiet. It is also superbly comfortable.

Each individual front seat is electrically powered for adjustment to legroom, seat height and cushion tilt. Further adjustment can be made manually to the seat back angle and lumbar support. A rotating knob enables the support of the lumbar spinal region to be increased or decreased.

From the driver's seat all controls are within easy reach. The steering wheel is designed and placed to provide a truly comfortable driving position.

The rear seat is formed of deep high density foam. It provides form and control for rear seat occupants. A fold down armrest can be used to form two individual seats.

Seats are covered in soft velour cloth. If you prefer, leather seat facings can be ordered, which provide the sumptuous LTD interior with an even stronger resemblance to the famous Chesterfield seats. Certainly whether cloth or leather is specified, the interior of the LTD is a place of dignity and ease.

(a) *The Power Moonroof can be deleted at reduced cost. When the Moonroof is not fitted, front and rear headroom is increased by approximately 2cm.*

(b) *The Class I Towing Pack is designed to provide a towing capability for loads with a gross weight of up to 907kg (2000 lbs) when used in conjunction with a suitable caravan or trailer braking system and towing equipment. The Pack consists of:*

- *Tow Bar*
- *Gooseneck*
- *Wiring harness with 7 pin electrical connector*
- *Transmission oil cooler*

Note: The Caravan or trailer braking system and any other items (such as the tow ball and safety chains) required for the attachment of a trailer, caravan or the like to the vehicle are not supplied as part of the Pack, and must be purchased at extra cost or be supplied by the purchaser of the vehicle.

The Class I Towing Pack is designed to be incorporated in the vehicle during the assembly of the vehicle. The actual towing capability and performance of a vehicle will depend upon many factors including the suitability of the caravan, trailer etc, the condition of the vehicle, the vehicle load, the vehicle specifications (including engine capacity, transmission type, axle ratio, tyre type and size), weather conditions, road gradient, terrain and other prevailing conditions.

Please consult the notes to the tables and your Authorised Ford Dealer for details of these options and correct operation of optional equipment before deciding to place your order.

*Just as the
Wedgetail Eagle
is created to slide smoothly
through the air, so too is the LTD
designed to glide down the road.
Effortlessly.*

There is a magical quality about the flight of any bird. Yet the Wedgetail Eagle seems able to perform this task with an economy of movement that eludes the lesser of the species.

Similarly, LTD performs with ease and grace. Its EFI engine responds to the accelerator with levels of power and torque you'll find hard to believe come from 6 cylinders.

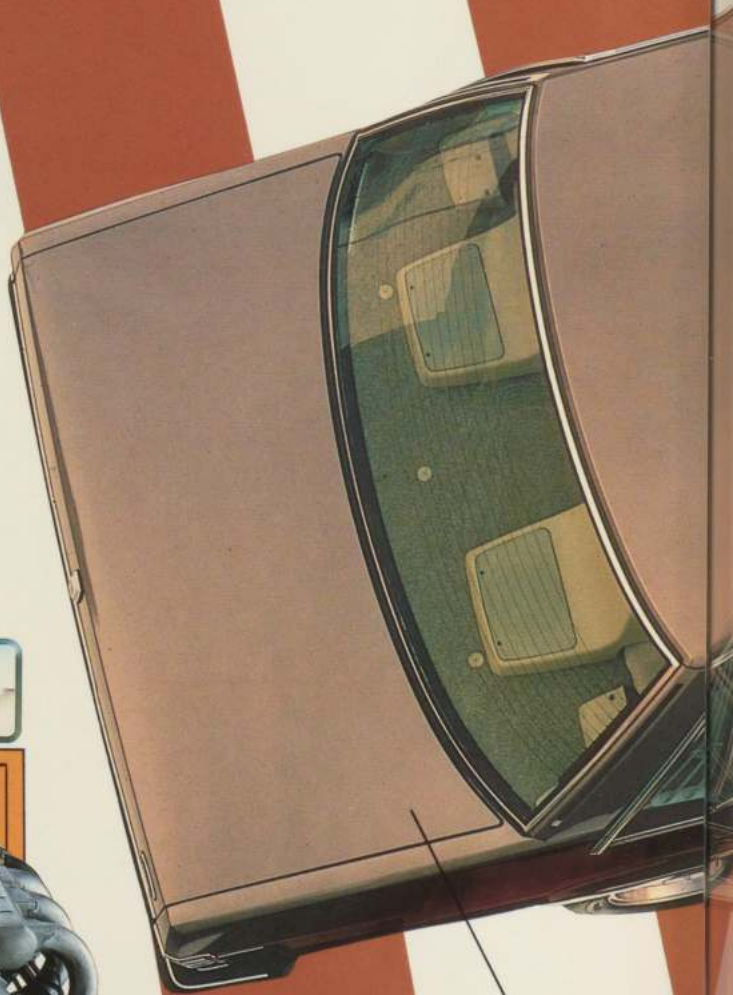

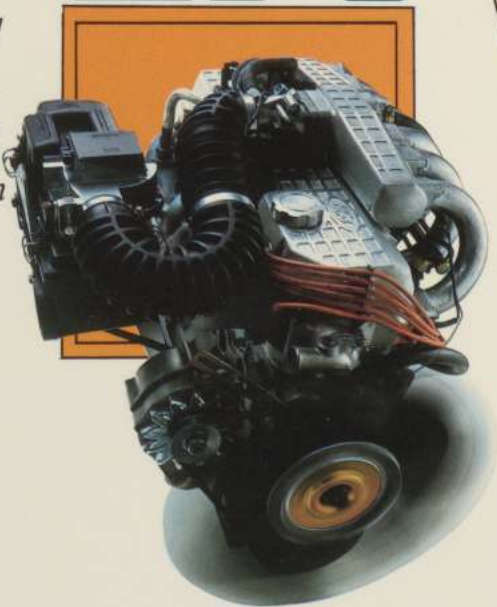

But sheer power is only one of the benefits of this sophisticated engine. It is also more practical. Routine maintenance is simpler than that required for a conventionally-aspirated engine. And because the EFI engine has a 'brain' that constantly monitors fuel requirements according to driving conditions, it uses less fuel than a V8 whilst delivering similar levels of performance.

In addition to the fuel-injected engine there is a Watts Link Rear Suspension System. With the inclusion of a Watts linkage, trailing arms and variable rate coil springs, the system provides excellent control, and a smooth, gentle ride.

The LTD, with four wheel power disc brakes, limited slip differential, power steering and many other technical attributes is able to glide down the roads, around the corners, and through the hills with an assuredness that provides a sense of confidence and ease in the minds of its occupants.

No wonder then that the LTD carries a name which indicates that its many qualities will be enjoyed by a limited number.

EFI

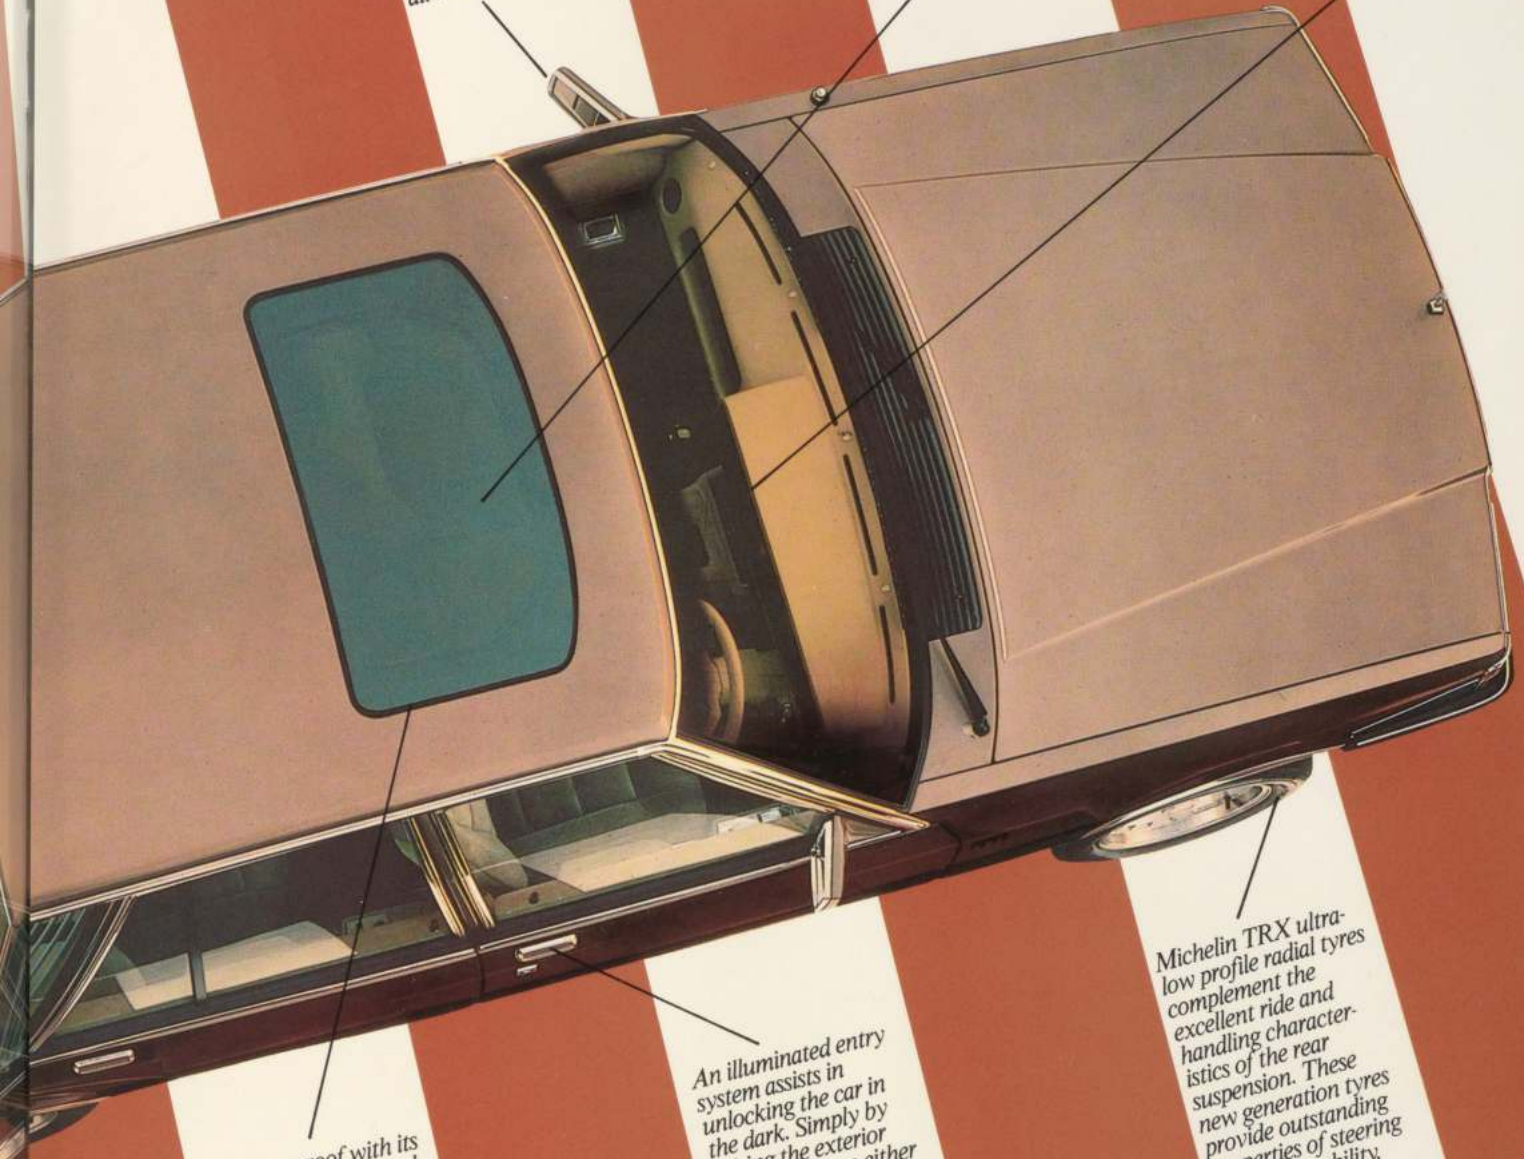

The LTD's boot is well proportioned and carpeted throughout. By pushing a button alongside the steering column, the boot can be opened electrically from the driver's seat.

Electric exterior rear view mirrors are controlled from the driver's seat. By selecting which mirror is to be reset, a simple electronic control is used to make the adjustment. The mirrors themselves are designed to maintain their setting over all road surfaces.

The centre console houses the controls for the power operated windows and power operated front seats. Also provided is a central door locking system which can be operated from either front door.

Integrated air-conditioning, fresh air and heating systems provide the LTD's driver and passengers with an environment that is temperate; no matter the weather outside. Even rear passengers are supplied with an air-conditioned breeze when required.

The moonroof with its power operated tinted glass panel, provides a delightful way to enjoy open air or sunshine. Below the glass panel a manually operated in-built sunshade, covered with matching headlining, closes off the roof when required.

An illuminated entry system assists in unlocking the car in the dark. Simply by raising the exterior door handle on either front door, the front door lock cylinder surrounds and car interior are illuminated for approximately 25 seconds.

Michelin TRX ultra-low profile radial tyres complement the excellent ride and handling characteristics of the rear suspension. These new generation tyres provide outstanding properties of steering response, stability, cornering and wet and dry adhesion.

About this brochure. This brochure is designed to provide you with a general introduction to the Ford Products (including available optional equipment) referred to, and should be read in conjunction with the latest specification sheets. Because of changes in conditions and circumstances Ford* reserves the right, subject to all applicable laws, at any time, at their discretion, and without notice to discontinue or change the features, designs, materials, colours and other specifications and the prices of their products, and to either permanently or temporarily withdraw any such products from the market without incurring any liability to any prospective purchaser or purchaser. The latest specification sheet should be referred to for information on the availability, ordering and use of optional equipment.

Always consult an Authorised Ford Dealer for the latest information with respect to features, specifications, prices, optional equipment and availability before deciding to place an order.
